

Manuel Gómez

I design and build digital products from early concept through production. My work spans consumer iOS, operational web platforms, backend automation, browser extensions, and research-heavy tools, with a bias toward polished user experiences.

PROFILE

Independent product builder working across product framing, interface design, implementation, infrastructure, and release.

CORE FOCUS

- Product strategy and UX
- Full-stack development
- iOS product engineering
- Backend and integrations
- Release and production systems

TECHNOLOGY

Mobile

Swift, SwiftUI, StoreKit, APNs

Web

Astro, TypeScript, JavaScript, Node.js, PHP, HTML/CSS

Data and backend

Supabase, PostgreSQL, MariaDB, Edge Functions, REST APIs

Delivery

Cloudflare, Nginx, PM2, GitHub Actions, App Store Connect

Integrations

OpenAI, Chatwoot, Stripe, Mercado Pago, Resend, TMDB, Cal.com

LANGUAGES

Spanish / English

SELECTED PRODUCT WORK / 2025-26

01 DramaPing

CONSUMER IOS / SWIFTUI + SUPABASE

- Built a native K-drama companion spanning discovery, watchlists, schedules, artist follows, recommendations, and notification history.
- Designed explainable ranking, notification, and reversible free/paid entitlement rules across the Swift client and Supabase services.

02 Leadso

CHATBOT CRM / PHP + MARIADB

- Architected an operational platform connecting acquisition, billing, WhatsApp, Chatwoot, AI conversations, customer access, CRM, and analytics.
- Moved the core chat path into a direct, inspectable runtime and operated the product across Cloudflare, Nginx, PM2, and VPS infrastructure.

03 Solantum

INTEREST PROFILER / ASTRO + NODE.JS

- Built a vocational platform spanning assessment, personalized output, scheduling, payment, automated email, administration, and generated PDFs.
- Created explainable interest-profile and advisor-question algorithms that keep evidence, hypotheses, and human judgment visibly separate.

04 Feedpecker

BROWSER EXTENSION / JAVASCRIPT + WEBEXTENSIONS

- Built a local-first X extension for account-location context, country and profile filtering, feed-geography analytics, and reversible controls.
- Added rate-limit-aware lookups, local caching, backup and restore, and a no-telemetry architecture without a developer-operated backend.

HOW I WORK

Start from the actual system, make the decision logic explicit, keep changes scoped, and verify the final state - not only the local implementation.
